Experience

Software Development Engineer Intern

Jan 2026 – Jun 2026

Amazon Development Centre India (Hyderabad) | Amazon Internship Certificate |

Customer Service Management Portal

- Designed and implemented a fine-grained authorization framework by integrating a centralized authorization service, replacing hardcoded access control for **40+ internal teams** and **700+ users**, eliminating application redeployments for permission updates.
- Owned production support and maintenance of a Java Spring Boot and React application handling **10K+ daily requests**, resolving production incidents, dependency upgrades, security vulnerabilities, and feature enhancement requests throughout the internship. Strengthened application security by implementing request throttling, removing privacy-sensitive logs, resolving dependency vulnerabilities, and validating fixes using Burp Suite.

Data Retention Compliance System

- Designed and implemented a regulatory-compliant hard deletion framework using Java and AWS services, enabling automated customer data deletion across distributed backend systems after retention expiry.
- Performed root cause analysis on an incorrect deletion timestamp workflow, redesigned the lifecycle, and enabled accurate retention scheduling for millions of customer profiles.
- Delivered the solution to production for customer profile services operating within backend systems supporting over **1M+ requests/second**, while optimizing the multi-region architecture using DynamoDB Global Tables and eventual consistency.
- Collaborated with cross-functional teams across India and the US to design, validate, and deploy the solution into production.

Technical Skills

Programming Languages: Java, Python, JavaScript, C

Backend & Frameworks: Spring Boot, Flask, Node.js, REST APIs

Frontend: React, HTML, CSS

Build & DevOps: Docker, Kubernetes, CI/CD, Git, GitHub, Linux

Cloud & AWS: AWS Lambda, CloudFormation, CloudWatch, IAM

Databases & Testing: MySQL, MongoDB, DynamoDB, JUnit, Mockito

Core CS: Data Structures & Algorithms, OOP, DBMS, OS, Computer Networks, Distributed Systems

Projects

AI-Powered Virtual Mock Interview Platform

- Developed an AI-powered mock interview platform that analyzes resumes, generates role-specific interview questions, and conducts adaptive interviews using real-time conversational AI.

AI-Powered Hackathon Project Evaluator

- Built an LLM-powered evaluation platform that automatically analyzes hackathon project proposals and ranks submissions based on innovation, technical feasibility, implementation quality, scalability, and business impact.

Education

B.Tech in AI and Data Science, St. Joseph's College of Engineering, Chennai (85.6%)

Nov 2022 - May 2026

Higher Secondary Education, Dharani International School, Tenkasi (94.5%)

Jun 2021 - May 2022

Secondary Education, Dharani International School, Tenkasi (93.5%)

Jun 2019 - May 2020

Achievements

- Solved **350+** Data Structures and Algorithms problems across LeetCode and GeeksforGeeks.
